

# Papaya Enzyme Peel

## Professional Enzymatic Exfoliator

Papain | Papaya Leaf | Bromelain

### **WHAT IT IS:**

Professional enzymatic-keratolytic-micro-exfoliation treatment with natural papaya extracts. Papaya enzyme is dormant in a clay base which becomes active with the addition of liquid. Removes the excess corneum layers and dead tissues on the skin. De-congests pores and helps to normalize impure skins. After treatment, the skin is soft, smooth and supple, and the pores are refined and tightened. Can be used on any skin type and works great for de-scarification.

### **SALON USAGE:**

FOR PROFESSIONAL USE ONLY. DO NOT USE ON SENSITIVE SKIN. DOES NOT NEED TO BE ACTIVATED WITH A VAPOR MACHINE

**Mild |** For a mild peel, mix 2 TBSP Papaya Enzyme Peel with 1 TBSP Anti-Ozone Mask and 1-2 TBSP water. Apply with a mask brush and leave on skin 3-4 minutes; remove with tepid water.

**Normal |** For a normal peel, mix 2 TBSP Papaya Enzyme Peel with 1-2 TBSP water or Papaya Controlling Lotion. Apply with a mask brush and leave on the skin for 3-7 minutes; remove with tepid water.

**Most Active |** An excellent alternative to strong glycolic and/or AHA peelings that can be too aggressive/invasive. Mix 2 TBSP Papaya Enzyme Peel with 1 TBSP Papaya Controlling Lotion. Apply with a mask brush and leave on for 15-20 minutes; remove with tepid water. The degree of peeling will be determined by the time length of application.

### **NOTES:**

A) - Please make sure that your client understands that when doing the most active peel is very strong and the skin will continue to peel for 2-4 days. The client should therefore avoid the sun during this time. **DO NOT COMBINE ANY TREATMENT PROCEDURES WITH THE APPLICATION OF THE REVITALIZING PEEL** (example: VAPOR, BRUSHING, MASSAGE, etc.)

B) - Plan your treatment so that there is a 2-3 day span after the application. After the 3rd day you may cleanse, tone, massage, and apply a serum as well as a regenerating mask. By allowing the time lapse in between the peel and the treatment, you allow the skin to rebalance from the enzymatic peeling.

C) - Always make sure to remove the peel thoroughly. Use tepid water and sanitized sponges, remove gently and then follow with cleanser and toner until the peel is completely off the skin.

**INGREDIENTS:** Kaolin, Celite Diatomite, Carica Papaya Leaf, Bromelain, Papain, Citric Acid, Ascorbic Acid

**AVAILABLE SIZE:** Professional, Ref. # 2540
